DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Group I. Claims 1-9 are, drawn to a method of counteracting the lack of balance of a rotary drive for a reciprocable guiding at least one continuous rod being repeatedly severed by an implement moving cyclically, classified in class 83, subclass 13.
- Group II. Claim 11 is, drawn to an apparatus containing at least one severing implement, classified in class 83, subclass 310.
- Group III. Claims 12-28 are, drawn to an apparatus containing a crank mechanism, a flexible carrier, and an additional counterpoise, classified in class 74, subclass 573 R.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions groups I and II-III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed can be used to practice another and materially different process such as a process not requiring one continuous rod which advances lengthwise in a predetermined direction, at a predetermined speed and along a predetermined path and is repeatedly severed by an implement moving

Art Unit: 3724

cyclically in and counter to the direction and arranged to sever the rod while advancing along a portion of the path as set forth in group I.

3. Inventions of groups II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. For example, the apparatus of group II could have a different drive assembly than those set forth in group III, and conversely, the apparatus of group III could have a different severing mechanism than those set forth in group II. See MPEP § 806.05(d).

Claim 10 is an apparatus claim having features of none of the subcombinations, and will be examined if any of apparatus groups II-III are elected. If claim 10 is ultimately determined to be allowable in its current form, rejoinder of claims dependent therefrom will be considered.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to S. Choi whose telephone number is 703-306-4523. The examiner can normally be reached on Monday thru Friday between 9am and 5pm. If
